DETAILED ACTION

Election/Restrictions

- [01] Claims 1,31 are allowable. The restriction requirement has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 9,45 are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim. In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
- [02] Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

- [03] The following is an examiner's statement of reasons for allowance.
- [03a] The utility of the recited device is that its buoyancy can be divided such that upon the detachment of its two constituent parts, one floats and the other does not. Other art discloses the use of buoyancy in endoscopic imaging. Lewkowicz (2003/0018280), for example, is concerned with "enhancing the buoyancy" of the system. In other words, the buoyancy is increased. According to one method, the

Art Unit: 3779

buoy is inflated sometime after ingestion of the device. See also Iddan (2006/0004255), Meron (2003/0216622), and Figure 9 of Imran (2004/0068204).

[03b] There is no fastener in Lewkowicz which is configured to detach a first part (having a specific gravity of less than one or approximately one) and a second part (having a specific gravity greater than one). The enhancement in buoyancy of Applicant's device is achieved by dropping ballast (fastener detachment) rather than inflating a buoy.

[03c] Other art shows fasteners, but they either do not detachably connect a first and second part having the various recited individual and combined specific gravities; nor are they configured to detach "during the passage of said device through said gastrointestinal tract." See, for example, Figure 22 of Uchiyama, showing detachability of constituent elements of unknown (and irrelevant) specific gravities. See, for example, Glukhovsky (2003/0120130) and Kobayashi (2004/0133076), showing an in vivo capsule attached to a tube.

[04] Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
